Re: Support for Delta Wetlands Project/In-Delta Storage Project

Dear Authority Members,

On behalf of the Silicon Valley Manufacturing Group (SVMG) I am writing today to express our organization's support for balanced implementation of the CalFed Bay-Delta Program ("CalFed"). One of the key components of the CalFed Record of Decision, which was supported by a broad coalition of interests, was the development and construction of new surface water storage projects, which could increase new water supplies and provide much-needed additional storage for California.

The business community has long supported the entire CalFed program and has specifically advocated that increased water supply reliability and new storage is required to manage the demands of a rapidly growing population and support California's vibrant economy. As you know, most, if not all, core business sectors in California cannot succeed without a stable and reliable source of water.

At this time, all other proposed storage projects under consideration by CalFed are at very preliminary phases of investigation. To date, the In-Delta Storage Project is the only proposed water storage and supply project to have been determined technically feasible. Beyond its water supply benefits, we are encouraged to see a project advance that can also provide complimentary benefits in water quality, ecosystem restoration and levee stability, and provide operational flexibility for the state and federal water projects.

We understand the California Department of Water Resources (DWR) recently released a state feasibility study of the In-Delta Storage Project, one of the five surface storage projects that the CalFed program is currently studying for potential implementation. While an economic analysis is yet to be complete, DWR's report found the project technically feasible and opined the project "could provide a variety of benefits and contribute to meeting each of CalFed's four objectives for water supply reliability, water quality, ecosystem restoration and levee system integrity." (Source: DWR's

Draft Executive Summary, In-Delta Storage Program State Feasibility Study, January 2004)

Therefore, we strongly encourage the California Bay-Delta Authority to continue its investigation of the In-Delta Storage Project, including any necessary economic and environmental reviews. Given the benefits identified by DWR, the project merits a thorough investigation.

On behalf of SVMG, thank you again for your leadership role in advancing the CalFed Bay-Delta Program.

Sincerely,

Margaret Bruce
